## ezFreezer® Quick Start Guide

## Why ezFreezer® ?

ezFreezer is an efficient system for keeping track of storage and retrieval of samples and biological materials.

ezFreezer is an affordable, risk-free solution.

Developed directly as a result of repeated requests from scientists,

ezFreezer provides the ability to visualize and manage laboratory samples, their location and usage right on the desktop through virtual freezers.

ezFreezer an easy-to-use interface along with the ability to customize fields helps researchers and scientists analyze, organize and visualize a multitude of sample types faster and more accurately.

Real-time statistics identify the exact quantity of particular samples in each freezer.

Fully customizable freezer configuration works for all freezer types, tank racking systems, and cryo storage units.

ezFreezer requires very little bandwidth and computing infrastructure and the data can be routinely backed-up to serve as a redundant source of information.

Web based client/server architecture allows access to data from anywhere with the one-time installation.

Download and install ezFreezer.

When logging in for the first time, login name and password for the default administrator login are both admin.

The first time you log in to ezFreezer, a welcome page provides an introduction to the ezFreezer workflow.

From time to time you may need to change your password to protect the data you have stored in ezFreezer.

Clicking the Freezers menu displays a graph of every freezer, subdivision, and box in ezFreezer.

In the Box view below the freezer graph, click an empty cell. To select more than one cell in the Box view, click the first cell, press and hold the Shift key, and then click other cells. To select entire column or row press column number or row letter.

In the Add New Sample area on the lower right, click the image corresponding with the sample type you want to add.

Once you add a sample to a box, you can also see that box in the List view, which is accessible by clicking the List view tab.

You can edit an individual sample's details from Box or List view. If you do not have permission to edit a sample, a lock image appears on top of the sample's image. Select a sample and press Edit Sample button.

You can remove a sample from a box or delete it from the ezFreezer database. Select the cell or list record of the sample you want to delete. Press Remove from Box button.

You may want to copy and paste samples. Select samples and press Cut button. ezFreezer places samples into its clipboard.

Press Paste button. ezFreezer places samples in the new location. A user can create a new sample based on an existing sample. Select a sample and press Copy button.

Select an empty cell and press Paste/New button. Note that this is the second of the two paste button types.

The image of the copied sample in the cell appears. The name of the new sample is the same as the original sample followed by "\_Copy".

To view a sample details double click a cell.

ezFreezer opens view sample window. Click Return to go back to the page where you selected the sample.

When creating a sample, you have the option of hiding the details of any custom-defined fields you create by selecting the Private checkbox. When this option is selected, other users and guests can neither view the sample's custom-defined fields nor copy those fields.

Administrators can transfer the ownership of objects belonging to one user to another user. Select samples and press Transfer Ownership button.

In the left navigation area, click or hover your mouse over that subdivision type. A pop-up menu appears. A user can browse, move containers, change container configuration and create exceptions.

ezFreezer provides several reports that displays different views of your ezFreezer data. Some reports are canned while others are customizable. After generating a report, you can print it by clicking the Print link or the print option in your browser.

You can search for any samples that you add or import to ezFreezer. Search criteria include both standard and customdefined fields. In the search box to the right of the top navigation menu type a term. Click the Search button.

Both users and Administrators can add pre-configured and customdefined sample types to ezFreezer. When a sample type is created, note that you do not yet need to add it to a freezer.

You can create sample types within ezFreezer at your convenience.

Users with administrative privileges can perform administrative tasks including changing freezer configuration, exporting and importing objects, and maintaining the ezFreezer database. For more information please read ezFreezer User Guide, press the Help link.
